RadauIIA-2: grading on the matrix level vs. on the eigenvalue level, $N = 8192$, $\widetilde{c} = 0.1$

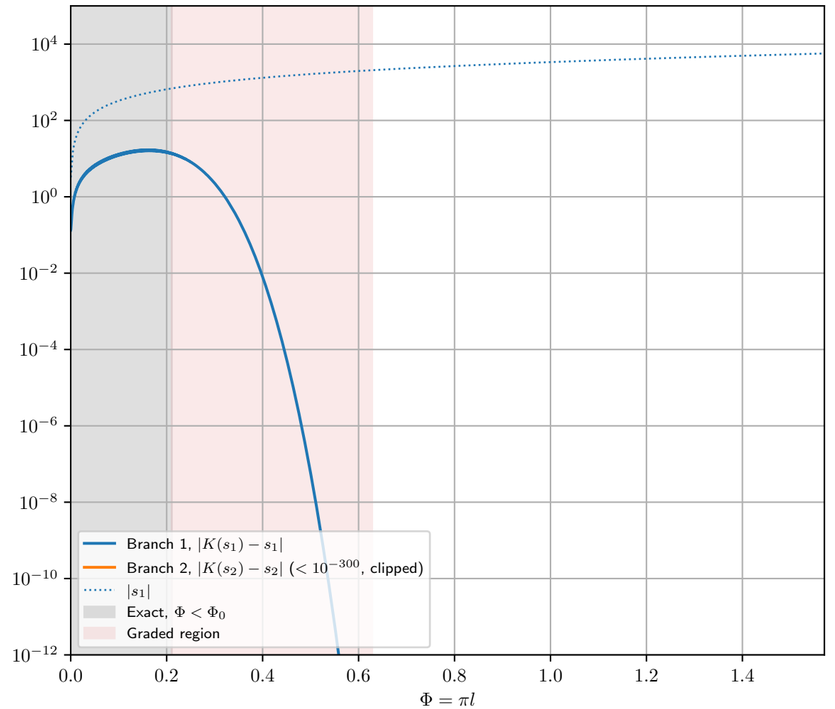

Matrix level: nodes on the contour, $l \in [0, \frac{1}{2}]$

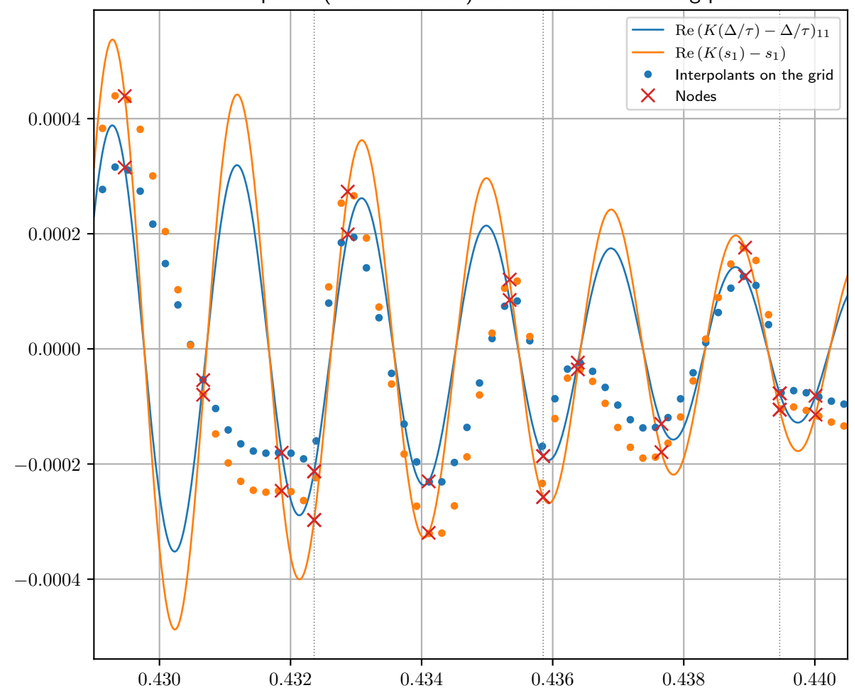

Images of the nodes: both eigenvalues $\tau s_{1,2}(\zeta)$

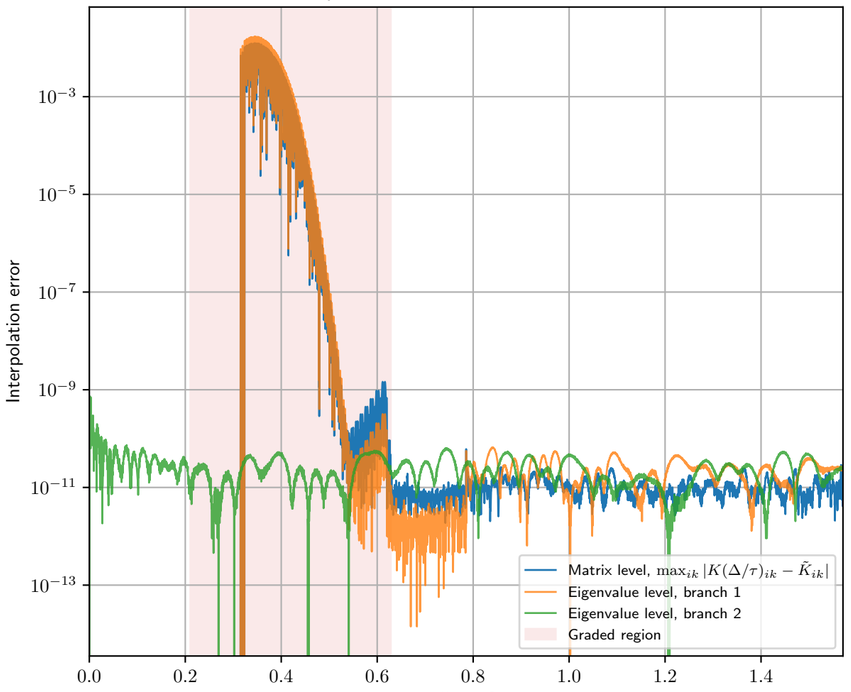

Oscillating part of K: only branch 1 near $\Phi = 0$ matters

Graded pieces (dotted borders) at $\Phi \approx 0.43$: oscillating parts

Interpolation errors, $N = 8192$, $\widetilde{c} = 0.1$

Cost of the gradings
